

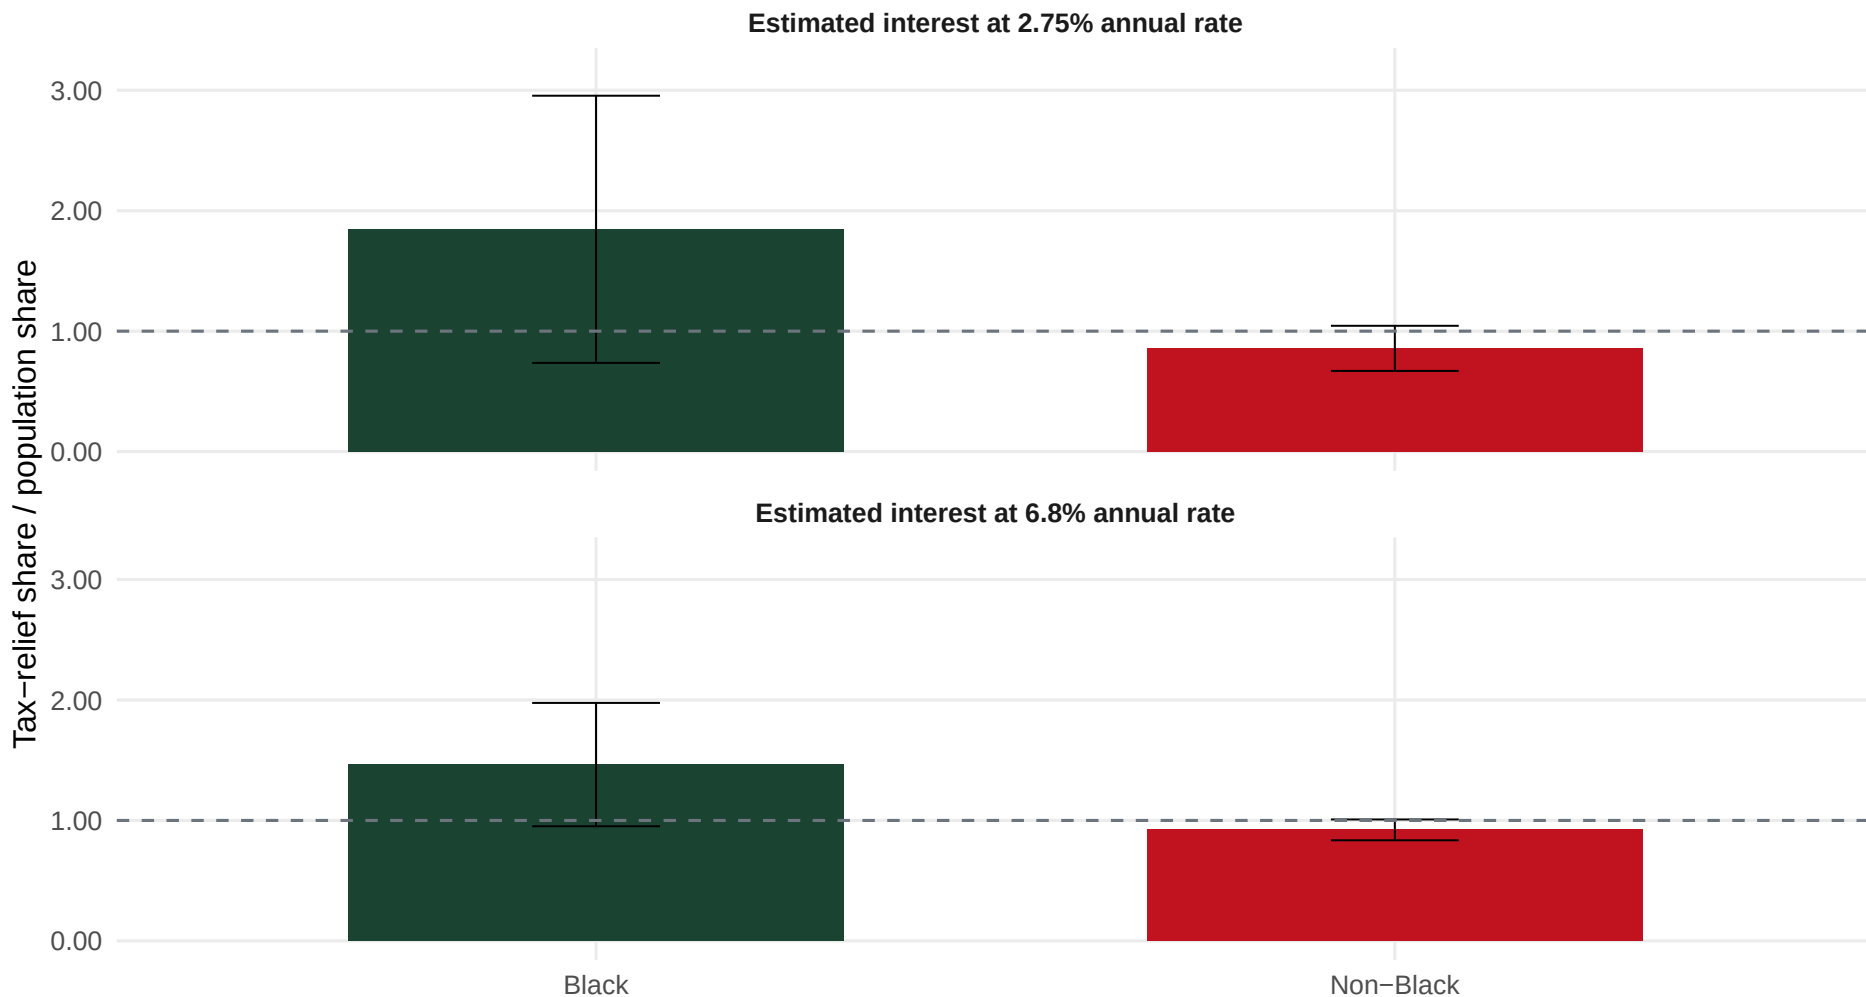

Figure 10: Black Households Receive a Larger Share of Binding-Constraint Relief Than Their Population Share

Ratio of each group's modeled tax-relief share to its U.S. Census population share among married households at the \$2,500 binding constraint.

Author's analysis of 2022 Survey of Consumer Finances data. Uses 2024 ACS 5-year Census table B02009 divided by B01003 for United States population shares. Population: married households at the current \$2,500 binding allowable-deduction constraint only. Bars show each group's share of modeled tax relief divided by its Census population share; a value above 1 means the group receives a larger share of modeled relief than its population share. Error bars show 95% confidence intervals.
